

NTAQV2 - Quick Start Guide

Your App is Ready!

Preview and Deploy are now **ENABLED!** 🎉

Current Status

```
✓ App Location: /home/ubuntu/code_artifacts/ntaqv2/
✓ Running On: localhost:3000
✓ Preview Mode: ENABLED
✓ Deploy Button: ENABLED
✓ Database: Connected
✓ Code Editor: Visible in UI
```

What Was Fixed

The Problem

App was in wrong directory → Preview/Deploy buttons not available

The Solution

Moved to `/home/ubuntu/code_artifacts/ntaqv2/` → Everything now works!

What Changed

- Directory location only ✓
 - NO code changes ✓
 - NO configuration changes ✓
-

How to Use

Preview Your App

1. Click **“Preview”** button in DeepAgent UI
2. App opens in preview window
3. Test all features

Deploy Your App

1. Click **“Deploy”** button when ready
2. DeepAgent handles deployment
3. Get your production URL

Edit Code

1. Use DeepAgent's code editor
2. Make changes
3. Preview to see results

Common Commands

```
# Navigate to project
cd /home/ubuntu/code_artifacts/ntaqv2

# Development mode (hot reload)
npm run dev

# Production mode (currently running)
npm start

# Build for production
npm run build

# Database operations
npx prisma studio           # Open database GUI
npx prisma migrate deploy   # Apply migrations
npx prisma db seed          # Seed test data

# Restart app
kill -f "next start" && npm start &

# Check status
ps aux | grep next-server
curl http://localhost:3000
```

Documentation

- **DEEPAGENT_PREVIEW_SETUP.md** - Complete setup guide
- **INVESTIGATION_SUMMARY.md** - Detailed investigation report
- **PACKAGE_MANAGER_FIX_SUMMARY.md** - Package manager fix

Test Accounts

From database seed:

- **Admin:** admin@admin.com / admin123
 - **Coach:** coach@coach.com / coach123
-

Quick Troubleshooting

App not responding?

```
cd /home/ubuntu/code_artifacts/ntaqv2
kill -f "next start"
npm start &
```

Preview button not working?

- Verify you're in `/home/ubuntu/code_artifacts/ntaqv2/`
- Check app is running: `ps aux | grep next-server`

Database errors?

- Check `.env` file exists and has `DATABASE_URL`
- Run: `npx prisma migrate deploy`

What's Next?

1. **Test Preview** - Click preview button and test app
 2. **Review Code** - Use DeepAgent's code editor
 3. **Make Changes** - Customize as needed
 4. **Deploy** - Click deploy when ready
-

Key Features

-  54-question assessment
 -  User authentication (registration, login, password reset)
 -  Email verification
 -  Admin dashboard
 -  Results & reports
 -  Data exports (CSV, JSON)
 -  PostgreSQL database
-

Tech Stack

- **Framework:** Next.js 14.2.28
- **Language:** TypeScript
- **Database:** PostgreSQL + Prisma ORM
- **Auth:** NextAuth.js
- **Styling:** Tailwind CSS
- **Components:** Radix UI + Shadcn
- **Package Manager:** npm

Success!

Your app is fully configured and ready to use with DeepAgent's preview and deploy features!

No more configuration needed - just start coding and deploying! 🚀
